### New Hampshire Residential Energy Code Application
for Certification of Compliance for New Construction, Additions and/or Renovations
(EC-1 Form)

**Minimum Provisions**

**Effective Date:** April 1, 2010

#### Owner/Owner Builder:

- **Company Name:** (if applicable)

  - **Name:**
  - **Mail Address:**
  - **Town/City:**
  - **State:**
  - **Zip:**
  - **Phone:**
  - **Cell:**
  - **E-Mail:**

#### General Contractor:

- **Company Name:**

  - **Name:**
  - **Mail Address:**
  - **Town/City:**
  - **State:**
  - **Zip:**
  - **Phone:**
  - **Cell:**
  - **E-Mail:**

#### Location of Proposed Structure:

- **Tax Map #:**
- **Lot #:**
- **Street:**
- **Town/City:**
- **County:**

#### Type of Construction:

- **Residential**
- **Small Commercial**
- **New Building**
- **Renovation**
- **Addition**
- **Thermally Isolated Sunroom**
- **Modular Home:** the site contractor must submit this form detailing supplementary rooms and Floor and/or Basement insulation unless the floor insulation is installed or provided by the manufacturer and no heated space is added.

#### Zone 5
- Cheshire, Hillsborough, Rockingham or Strafford except the town of Durham that uses 2012 IECC

#### Zone 6
- All other counties and the town of Durham

#### Total New Conditioned* Floor Area:

- __________________________ ft²

#### Heating System:

- **Annual Fuel Use Efficiency (AFUE):**
- **Fuel Type(s):**
  - Oil
  - Natural Gas
  - Propane (LP)
  - Electric
  - Wood
  - Other ______________
- **Heating System Type:**
  - Hot Water
  - Hot Air
  - Stove
  - Resistance
  - Heat Pump
  - Geothermal

#### Structure is EXEMPT because:

- Mobile Home
- On an historic register
- Low energy use (less than 1 watt/ ft²)

#### Form Submitted by:

- Owner
- Builder
- Designer
- Other ________

Architects must certify plans meet code; no form required.

I hereby certify that all the information contained in this application is true and correct, and construction shall comply in all respects with the terms and specifications of the approval given by the Public Utilities Commission and with the New Hampshire Code for Energy Conservation in New Building Construction.

- **Signature**
- **Print Name**
- **Date**

---

**Official Use Only**

- **Date Complete Application Received:**
- **Approvals Number:**
- **Approved by:**
- **Stamp:**

Reason: ☐ 1; ☐ 2; ☐ 3; ☐ Other: ________________

Notice: ☐ e-mail; ☐ vms; Date: ________________

EC-1 Form page 1
You are encouraged to build with higher R-values and lower U-values than you report here. The “Required R or U Values” are the worst permitted in NH.

### Building Section
- **Window U Factor**
  - **(lower U is better)**
  - **U .35** (maximum)
  - **U-.32** (if log walls in Zone 5)
  - **U-.30** (if log walls in Zone 6)
  - **U .50** (Thermally Isolated Sunrooms only)

- **Skylights**
  - **U .60**

- **Flat Ceiling**
  - **R-38** (Zone 5)
  - **R-49** (Zone 6)
  - **R-49** if using the above construction technique

### Your Proposed Structure

#### Required R or U Values

- **Door U-Value**
  - **U .35** (maximum)

- **Floor R Value**
  - **R-30** or Insulation sufficient to fill joist cavity

- **Baseline or Crawl Space Wall R Value**
  - **R-10** Continuous Insulation
  - **R-13** Cavity Insulation or Continuous Insulation

- **Slab Edge R Value**
  - **R-10** 2’ (Zone 5) 4’ (Zone 6)
  - **add R-5** if the Slab is heated or R-15 under entire heated slab if a log home.

- **Air Sealing**
  - Planned Air Sealing Test Method
    - There are two approaches to demonstrating compliance with air sealing requirements.

### Planned R and U Values

- **Write in R-Value**
  - **Write in U-Value**

- **NOTE:** R-38 will be deemed to satisfy the requirement for R-49 if the full R-38 insulation value is maintained over the outside plates. **By checking this box, I certify that this structure is being built with a raised energy truss or that the full R-value of the ceiling insulation will be maintained over the outside plates.**

- **Log homes must comply with ICC400-2012, have an average minimum wall thickness of 5” or greater with specific gravity of ≤0.5 or 7” with specific gravity >0.5.**

- **Blower Door**
  - The visual inspection certification must be consistent with the requirements of Table 402.4.2 (page 4) and the method of compliance planned and approved by the local jurisdiction.
Footnotes to Residential Energy Code Application for Certification of Compliance

i  Ceilings with attic spaces: R-30 in Zone 5 or R-38 in Zone 6 will be deemed to satisfy the requirement for R-38 or R-49 respectively wherever the full height of uncompressed R-30 or R-38 insulation extends over the wall top plate at the eaves or the full R-value is maintained. This is accomplished by using a raised heel or energy truss as shown in the diagram below or by using higher R-value insulation over the plates.

![Ceilings Diagram](image)

ii  R-13 + R-5 means R-13 cavity insulation plus R-5 insulated sheathing. If structural sheathing covers 25 percent or less of the exterior, R-5 sheathing is not required where the structural sheathing is placed. If structural sheathing covers more than 25 percent of exterior, the structural sheathing must be supplemented with insulated sheathing of at least R-2.

iii  Slab edge insulation must start at the top of the slab edge and extend a total of two (Zone 5) or four feet (Zone 6). Insulation may go straight down, out at an angle away from the building, or along the slab edge and then under the slab. A slab is a concrete floor within 1’ of grade level. See diagram below.

The top edge of insulation installed between the exterior wall and the interior slab may be mitered at a 45 degree angle away from the exterior wall.

![Slab Insulation Diagram](image)

Allowable Slab Insulation Configurations

A or A+ B must equal two feet in Zone 5 or four feet in Zone 6

MODULAR HOMES must be certified by the NH Department of Safety. Unless the floor insulation is provided by the manufacturer this form must be submitted. This form must also be submitted if the basement is to be insulated or supplementary heated space is added to the home upon or after it is set.

## Air Leakage

**Code section 402.4**

The building thermal envelope must be durably sealed to limit infiltration.

- All joints, seams, penetrations and openings in the thermal envelope including those around window and door assemblies, utility penetrations, dropped ceilings or chases, knee walls, behind tubs and showers, separating unheated garages from the thermal envelope, common walls between dwelling units, attic access, rim joist junction and all other openings in the building envelope that are sources of air leakage must be caulked, gasketed, weather-stripped or otherwise sealed.

## Air Sealing and Insulation

**Code Section 402.4.2**

Building envelope air tightness and insulation installation shall be demonstrated to comply with requirements by Blower Door testing to less than 7 air changes/hr at 50 Pa or a visual inspection per page 4 of this document. The local Building Official may require an independent 3rd party to conduct the visual inspection. See page 4.

### Testing Option

**Code Section 402.4.2.1**

- **Or**

  - Blower Door Test conducted by: _______________________________________
  - Result (at 50 Pa): ________ CFM  Interior Volume___________ CF  ______________ ACH

### Visual Option

**Code Section 402.4.2.1**

- Structure passes Visual Inspection: ____________________________ signed _____________ date

## Fireplaces

**Code Section 402.4.3**

New wood-burning fireplaces shall have gasketed doors and outdoor combustion air.

## Recessed Lighting

**Code Section 402.4.5**

Recessed lights must be type IC rated and labeled as meeting ASTM E 283 and sealed with a gasket or caulk between the housing and the interior wall or ceiling covering.

## Electrical Power and Lighting Systems

**Code section 404**

A minimum of 50% of the lamps in permanently installed lighting fixtures shall be high efficacy lamps.

## High-Efficacy Lamps

**Code section 202**

Compact fluorescent lamps, T-8 or smaller diameter linear fluorescent lamps, or lamps with a minimum efficacy of:

1. 60 lumens per watt for lamps over 40 watts,
2. 50 lumens per watt for lamps over 15 watts to 40 watts, and
3. 40 lumens per watt for lamps 15 watts or less.

## Materials and Insulation Information

**Code section 102.1**

Materials and equipment must be identified so that code compliance can be determined. Manufacturer manuals for all installed heating, cooling and service water heating equipment must be provided. Insulation R-values, glazing and door U-values and heating and cooling equipment efficiency must be clearly marked on the building plans, drawings or specifications.

## Pull-Down Attic Stairs, Attic Hatch, and Knee Wall Doors

**Code section 402.2.3**

Should be insulated to a level equal to the surrounding surfaces and tightly sealed and weather-stripped at the opening.
| **Full size Attic or Basement Entry Doors** | All doors leading from a conditioned space into an unconditioned attic or enclosed attic or basement stairwell should be insulated and weather-stripped exterior rated door units. One door is exempt. |
| **Duct Insulation**<br>Code section 403.2 | **Supply** ducts in attics must be insulated to at least R-8. All other ducts must be insulated to at least R-6. Exception: Ducts or portions thereof located completely inside the building thermal envelope. |
| **Duct Construction**<br>Code sections 403.2.2 & .3 | Ducts, air handlers, filter boxes, and building cavities used as ducts must be sealed. Joints and seams must comply with Section M1601.4.1 of the *International Residential Code*. Building framing cavities must not be used as supply ducts. |
| **Duct Testing**<br>Code sections 403.2.2 & .3 | Duct tightness shall be verified by testing unless the air handler and all ducts are located within the conditioned space. Test conducted by: _____________________________.

Duct test result at 25 Pa: _______________ Post construction or _______________ Rough-in test |
| **Temperature Controls**<br>Code section 403.1 & .1.1 | At least one thermostat must be provided for each separate heating and cooling system. Hot air systems must be equipped with a programmable thermostat.

Heat pumps having supplementary electric-resistance heat must have controls that, except during defrost, prevent supplemental heat operation when the heat pump compressor can meet the heating load |
| **Mechanical System Piping Insulation**<br>Code section 403.3 | Mechanical system piping capable of conveying fluids at temperatures above 105°F or below 55°F must be insulated to R-3. |
| **Circulating Hot Water Systems**<br>Code section 403.4 & NH amendments | Circulating service water systems must include an automatic or readily accessible manual switch that can turn off the hot water circulating pump when the system is not in use.

Circulating domestic hot water system piping shall be insulated to R-4. |
| **Mechanical Ventilation**<br>Code section 403.5 | Outdoor air intakes and exhausts must have automatic or gravity dampers that close when the ventilation system is not operating. |
| **Equipment Sizing**<br>Code section 403.6 | Heating and cooling equipment must be sized in accordance with Section M1401.3 of the *International Residential Code*. |
| **Certificate**<br>Code section 401.3 | A permanent certificate, completed by the builder or registered design professional, must be posted on or in the electrical distribution panel. It must list the R-values of insulation installed in or on the ceiling, walls, foundation, and ducts outside the conditioned spaces; U-factors and SHGC for fenestration. The certificate must also list the type and efficiency of heating, cooling and service water heating equipment. |
